OSLO - Open Source Library for OCL

- based on Kent OCL Library
- implementation of OCL 2.0
- OCL for metamodels
- query models
- check design guidelines and modelling rules
- compute metrics for models

The project also provides a simple GUI Tool which enables the evaluation of OCL constraints against EMF based models. The models can be loaded reflective, the tool works independent from ecore based metamodels. Additionally a web service provides functions for checking OCL constraint against UML2 models.
